AUDIO POWER SPECIFICATIONS (US Model)

POWER OUTPUT AND TOTAL HARMONIC DISTORTION:

With 4 ohm loads, both channels driven, from 20 – 20,000 Hz; rated 140 watts per channel minimum RMS power, with no more than 0.008% total harmonic distortion from 250 milliwatts to rated output.

With 8 ohm loads, both channels driven, from 20 – 20,000 Hz; rated 105 watts per channel minimum RMS power, with no more than 0.004% total harmonic distortion from 250 milliwatts to rated output.

Power band - width (IHF)	4 ohms, 0.02%	10 Hz - 100 kHz
	8 ohms, THD 0.02%	10 Hz - 100 kHz
Dynamic headroom ('78 IHF)	4 ohms	3 dB

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY SHADING AND MARK  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

ATTENTION AU COMPOSANT AYANT RAPPORT A LA SECURITE!

LES COMPOSANTS IDENTIFIES PAR UNE TRAME ET UNE MARQUE  SUR LES DIAGRAMMES SCHEMATIQUES ET LA LISTE DES PIECES SONT CRITIQUES POUR LA SECURITE DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIECES SONY DONT LES NUMEROS SONT DONNES DANS CE MANUEL OU DANS LES SUPPLEMENTS PUBLIES PAR SONY.

FEATURES

Newly developed technologies assure excellent performance and tone quality

Pure sound

A head chassis, named "Gibraltar" which provides high rigidity and periodic damping characteristics, is employed to reduce distortion caused by vibrations. This reduces air vibrations caused by floor and speakers and also reduces vibrations caused by the power transformer and power transistors.

Spontaneous twin drive power circuit

Condensers having large capacity are used for the voltage amplification drive stage of class A and power output stage of class B. Thus, a stable output and high quality sound are obtained, resulting in exclusion of power interferences. The class A stage realizes a stable operation free from interference of the power stage even when an instantaneous or strong output is received.

Simple and direct tone control

The tone controls consist of only passive elements to minimize the deterioration of tone quality at the tone control circuit. Tone control elements can be passed by depressing the tone switch.

Source direct switch

A source direct switch is employed to reproduce high fidelity sound.

Any source can be reproduced without passing through the circuits of tone control, subsonic filter, mode switch and balance control.

Super legato linear system

The power amplifier drives low impedance speakers and assures powerful reproduction without low crossover distortion and switching distortion over the wide range. (Low impedance instantaneous service output 350 W \times 350 W, 1 ohm loaded)

SAFETY CHECK-OUT (US Model)

After correcting the original service problem, perform the following safety check before releasing the set to the customer:

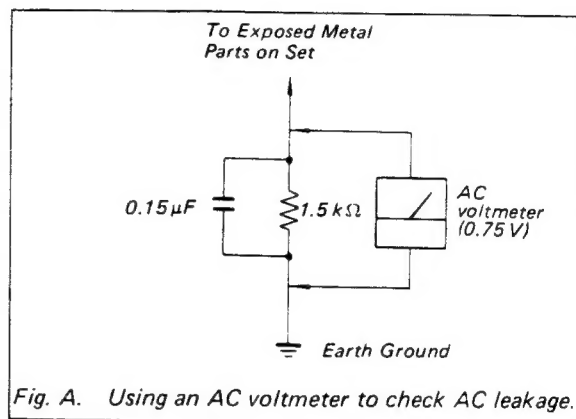

Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.

3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

FUNCTION OF CONTROLS

Front panel / Panneau avant / Vorderseite / Panel frontal / Voorpaneel

Rear panel / Panneau arrière / Rückseite / Panel posterior / Achterpaneel

Front panel

- 1 POWER switch**
- 2 Power/standby indicator**

Immediately after turning ON the power, the standby indicator lights in red as the built-in muting circuit activates.

When the amplifier stays in a stable operating condition, the indicator lights in green.

The indicator lights in red when the unit detects shorting of circuit of the speaker outputs or in case of short-circuit of the inputs of DC components.

In such a case, disconnect the power source and check the connected components and speaker systems.
- 3 SPEAKERS selector**

Select speaker system A or B, or both.

For headphone monitoring only, set the selector to OFF.
- 4 TONE switch and indicator**

Depress the switch to activate the tone control circuit.

Red indicator lights.
- 5 INPUT SELECTOR and TAPE input selector**

To select the desired program source, use the INPUT SELECTOR.

To select TAPE 1, 2 or 3, set the INPUT SELECTOR to TAPE and set the TAPE input selector to the desired tape input position.
- 6 SOURCE DIRECT switch and indicator**

Depress the switch. The red indicator lights and the circuits of the TONE switch, SUBSONIC filter switch, BALANCE control and MODE switch are disengaged without regard to the setting of the switches.

When this switch is activated, the indicator of the TONE switch does not light.
- 7 MUTING switch and indicator**

Generally, keep the switch released (OFF).

Depress the switch to reduce the sound level by 20dB. (Output voltage becomes 1/10.)
- 8 ATTENUATOR knob**

Regulates the sound level.
- 9 HEADPHONES jack (stereo phone jack)**
- 10 MODE selector**

STEREO: For listening to a stereo program.

MONO: For listening to a monaural program.
- 11 TURNOVER frequency selection switches**

Switch the turnover frequency.
- 12 BASS and TREBLE controls**

These controls activate when the TONE switch is depressed.
- 13 REC OUT SELECTOR**

Selects the program source sent to the REC OUT jacks (rear panel).
- 14 CARTRIDGE LOAD selector**

Set the selector according to your cartridge.

MM: For moving-magnet type cartridge

MC: For moving-coil type cartridge

40 Ω : For a cartridge with an impedance of 40 ohms or more.

3 Ω : For a cartridge with an impedance of 3 ohms to 40 ohms.
- 15 SUBSONIC filter switch**

Depress the switch to reduce unwanted noise components of less than 15Hz, which cause modulation noise.
- 16 BALANCE control**

Controls the sound level of left and right speakers.

Rear panel**17 PHONO input jacks****18 TUNER input jacks****19 CD (Compact Disc) input jacks****20 AUX (Auxiliary) input jacks****21 ADAPTOR IN/OUT (input and output) jacks and adaptor switch**

The OUT jacks output the signals selected by the INPUT SELECTOR on the front panel and the IN jacks receive the signals.

When an additional equipment such as a graphic equalizer is connected, set the adaptor switch to ADAPTOR.

When the jacks are not used, set the switch to NORMAL.

22 AC OUTLET(s) and VOLTAGE SELECTOR (E Model)

The AC OUTLET is used to power other audio components whose total power consumption is less than the wattage indicated near the AC OUTLET.

23 Ground terminal $\overline{\text{M}}$

To prevent hum, be sure to connect the ground wire of the turntable system to this ground terminal. If hum still exists, it may be helpful to connect the ground terminal directly to earth via a ground rod.

Note

In some particular MM cartridges, the ground for signal is connected to the ground for cartridge body.

If this type of cartridge should be installed to a metal cartridge shell, current will flow through the tonearm ground in a loop and will cause hum noise. In this case, disconnect the turntable ground wire from the $\overline{\text{M}}$ terminal of the amplifier, or disconnect the ground for cartridge body from the ground for signal.

**24 25 26 TAPE RECORDER 1, 2, 3 input/output jacks**

REC OUT (recording output) jacks: Accept the tape input jacks of the tape recorder.

To connect a hi-fi video cassette recorder, connect the audio line input jacks of the video cassette recorder to these jacks.

TAPE (tape input) jacks: Accept the REC output jacks of the tape recorder.

To connect a hi-fi video cassette recorder, video disc player or TV tuner, connect the audio line output jacks of each equipment to these jacks.

27 SPEAKER output terminals

Two pairs of speaker systems can be connected.

System A, system B or system A and B can be selected by means of the front panel SPEAKERS selector.

NOTE ON REPAIRING DISASSEMBLY AND ASSEMBLY FOR SWITCH SECTION

Note: Follow the assembly procedure in the numerical order given.

DISASSEMBLY

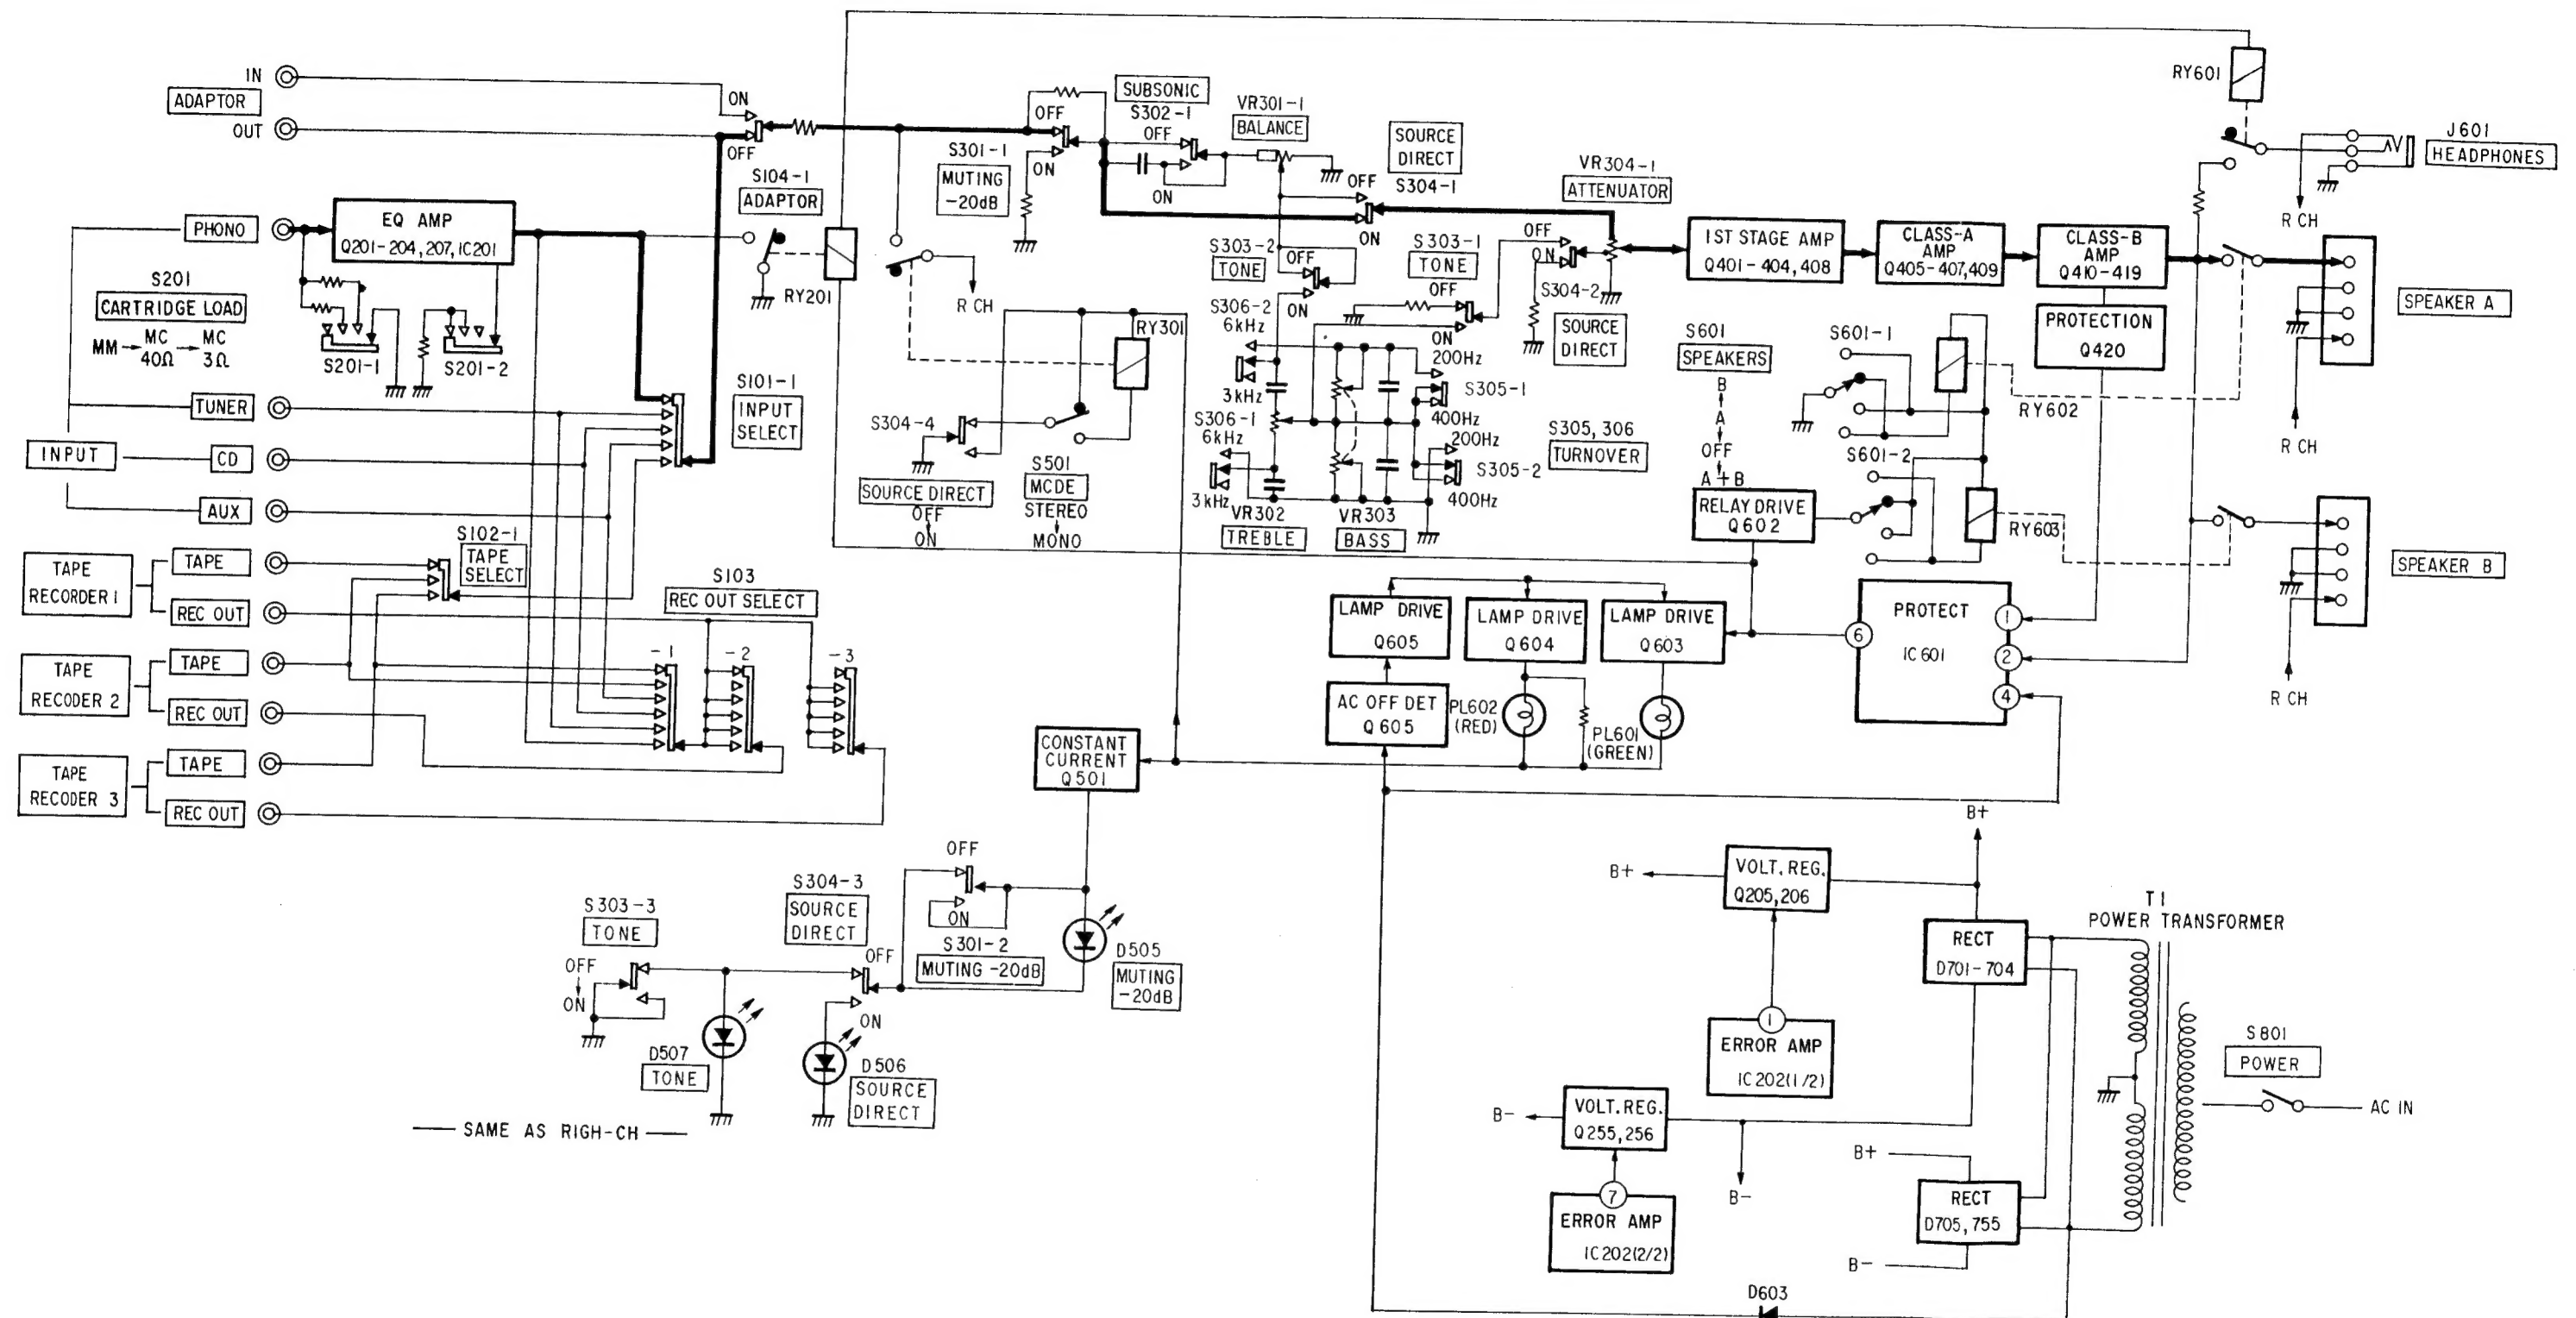

Insert in the screwdriver and remove the wiring as illustrated below
CAUTION: Don't pull the wiring. It causes the wiring damage.

SECTION 3 ADJUSTMENTS

NOTE:

- Adjustments should be performed 10 minutes after the POWER switch is on (POWER ON).

OFFSET Adjustment

1. Turn the ATTENUATOR knob fully counterclockwise under no-signal conditions.
2. Adjust RT401 and RT451 for 0V readings VOM.

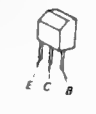

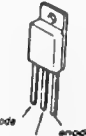

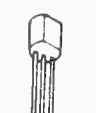

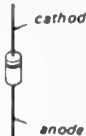

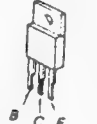

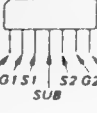

DC BIAS Adjustment

1. Turn the ATTENUATOR knob fully counterclockwise under no-signal conditions.
2. Adjust RT402 and RT452 for 15mV readings on VOM.

SECTION 6

ELECTRICAL PARTS LIST

NOTE:

- Items marked "★" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

CAPACITORS:

MF: μ F, PF: μ PF.

RESISTORS

- All resistors are in ohms.
- F : nonflammable

COILS

• MMH : mH, UH : μ H

SEMICONDUCTORS

In each case, U : μ , for example:UA... : μ A..., UPA... : μ PA..., UPC... : μ PC,
UPD... : μ PD...

The components identified by shading and mark Δ are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque Δ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.
